

Runview — System Architecture & Data Flow

Single Docker image (React SPA + FastAPI) · PostgreSQL 17 + pgvector · external AI & tooling integrations

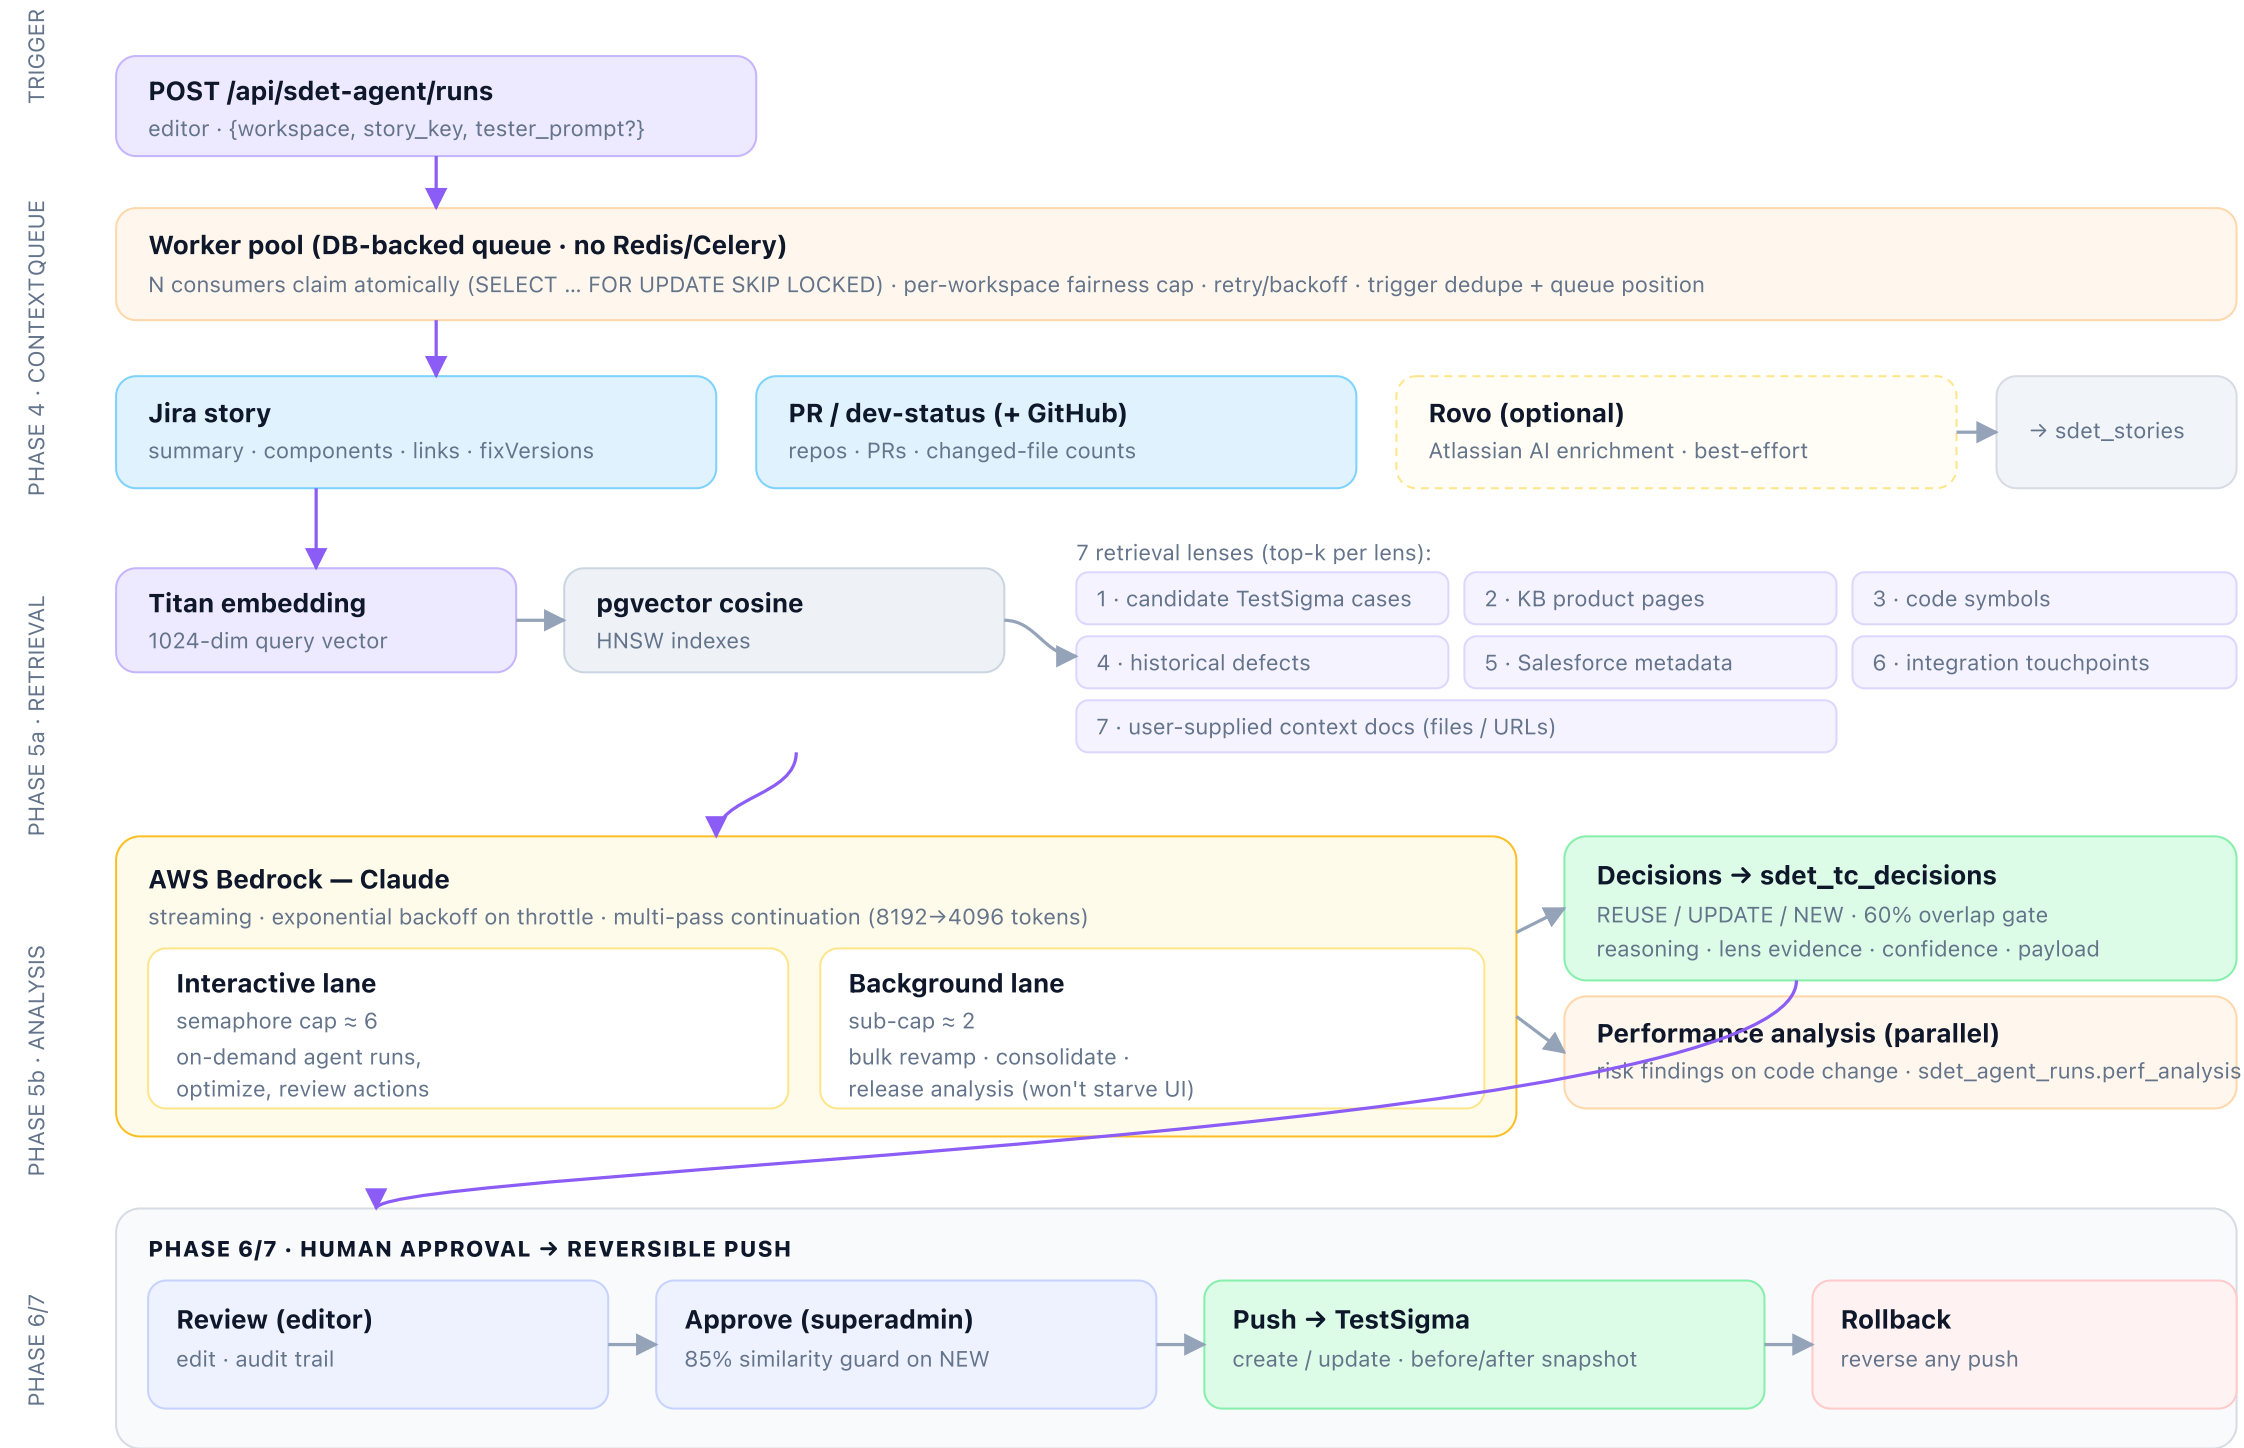

Core results portal SDET Agent (AI) Test Library Data External services

Auth: JWT (HS256, 24h) for users · bcrypt API keys for CI · roles viewer/editor/superadmin. Migrations: additive Alembic chain (head 0022), auto-applied at startup.
Deploy: multi-stage Docker image (Node builds SPA → Python runtime, non-root UID 10001); Postgres on internal network, not host-exposed.

SDET Agent run — worker queue, Bedrock lanes & 7-lens retrieval

Detail of an asynchronous agent run: DB-backed queue → context → vector retrieval → Bedrock (two concurrency lanes) → human approval → reversible TestSigma push.

Companion documents: **PRODUCT_DOCUMENTATION.md** (features) · **ARCHITECTURE.md** (mermaid diagrams + data model) · **SECURITY_AUDIT.md** (controls & gaps). Solid arrows = primary request/data path; dashed = optional/secondary.
