

MADHU SUDHAN PAINOORI

VP / Senior Director • AI Quality Engineering • Engineering Effectiveness • AI Platform Transformation

Hyderabad, India • +91 80086 90004 • p.mschary@gmail.com • [linkedin.com/in/madhu-sudhanpainoori](https://www.linkedin.com/in/madhu-sudhanpainoori)

EXECUTIVE PROFILE

Quality Engineering and AI-platform executive with 20+ years scaling engineering quality across SaaS and enterprise products. Currently lead Quality Engineering at AutoRabit — a multi-product Salesforce DevSecOps suite — with 50 direct reports and 100+ matrix scope across Product, Engineering, QA, SRE, and Support. A hands-on technical leader who architected and shipped — from scratch — a production agentic-AI test-intelligence platform (RAG, AWS Bedrock, human-in-the-loop approval, self-healing automation), drove AI agents that automate ~95% of repetitive engineering effort, and built internal engineering-intelligence platforms (DORA, velocity, AI-driven test management) — translating AI adoption into measurable outcomes, including a ~70% reduction in customer escalations. Operates at the intersection of AI engineering, test automation, platform quality, and enterprise transformation.

SIGNATURE IMPACT

- **Architected & built RunView from scratch** — a self-hosted, production agentic-AI test-intelligence platform (FastAPI · React 19 · PostgreSQL / pgvector) pairing a 7-lens RAG + AWS Bedrock SDet agent with human-in-the-loop approval and reversible writes, a CI results portal, and a full test-management workspace.
- **~95% automation** of repetitive, manual engineering effort through AI agents and GenAI tooling, materially lifting delivery velocity and engineering ROI across cross-functional teams.
- **~70% reduction in customer escalations** and reduced quality-linked churn by embedding intelligent quality gates across a four-product DevSecOps suite.
- **Built RabbitView** — an in-house engineering-intelligence platform (DORA metrics, team and individual velocity, backlog, release monitoring, analytics) that replaced spreadsheet- and Slack-based status as a single pane of glass for Product, Engineering, and QA.
- **Drove enterprise-wide GenAI adoption** (Claude / Claude Code, Amazon Bedrock, Copilot, Cursor, AWS Kiro, KaneAI, Mabl), establishing the operating model, guardrails, and tooling standards for AI-native engineering.

CORE COMPETENCIES

AI & Agentic Systems: Agentic AI Architecture · AI Agents for SDLC & QA · GenAI / LLM-Assisted Test Design · Self-Healing Automation · RAG & Model Evaluation · Human-in-the-Loop Guardrails · AI Governance & Risk · LLMOps

Quality Engineering: AI-Native Quality Strategy · Scalable Test Architecture · Shift-Left & In-Sprint Automation · Release & Risk Management · Security Testing & DevSecOps · Performance Engineering · APM & Production Monitoring

Engineering Effectiveness: DORA / SPACE / DX Core 4 Metrics · Developer Productivity (DevEx) · Engineering Intelligence Platforms · AI ROI & Value Realization · Internal Platform Engineering · CI/CD & DevOps Integration

Leadership: Cross-Functional Org Leadership · Enterprise AI Transformation · Stakeholder & Executive Communication · Team Building & Mentoring · Agile / Scrum Delivery · Vendor & Tooling Strategy

PROFESSIONAL EXPERIENCE

Senior Director, Quality Engineering

May 2021 – Present

AutoRabit Pvt Ltd — DevSecOps SaaS platform for Salesforce • Release Management · CodeScan · Vault · DataOps

- Own enterprise quality strategy across four product lines, leading a 50-person QA organization with 100+ indirect / matrix scope across Product, Engineering, QA, SRE, and Support; embed quality gates into the SDLC and align testing roadmaps with product and engineering leadership.
- Architected an **agentic AI platform on AWS Kiro** (specs / skills / steering / MCP): Jira story → autonomous agent development → impact analysis → AI-generated tests → Playwright + MCP + Amazon Bedrock execution and self-healing → validated release; deployed a PR Quality & Coverage Agent that lifts unit-test coverage and code quality on every pull request.
- Led **organization-wide GenAI adoption** (Claude / Claude Code, Amazon Bedrock, Copilot, Cursor, AWS Kiro, KaneAI, Mabl, TestAI), automating ~95% of manual tedious effort via AI agents — lifting velocity, improving engineering ROI, and accelerating customer-focused delivery.
- Architected and built **RunView** end-to-end — a self-hosted agentic test-intelligence platform (FastAPI + React 19 + PostgreSQL 17 / pgvector, single hardened Docker image) unifying a CI results portal, an AI SDet agent, and a full test-management workspace. The agent pulls Jira/PR context, runs 7-lens pgvector (HNSW) RAG retrieval on Titan embeddings, and uses AWS Bedrock / Claude for REUSE-UPDATE-NEW decisions behind human approval and reversible TestSigma writes; adds in-app Playwright generation and self-healing via the

Claude Code CLI (Docker or Bitbucket / AWS CodeBuild backends), RBAC, OIDC SSO, and encrypted secrets — multi-workspace across ARM, CodeScan, Vault, Guard, and Salesforce.

- Built **RabbitView**, the in-house engineering-intelligence platform serving Product, Engineering, and QA — DORA metrics, individual and team velocity, backlog tracking, release monitoring, and analytics in a single pane of glass.
- Shipped a portfolio of internal platforms on TypeScript / Python / Docker / PostgreSQL / Redis: a **Bedrock-powered AI-enabled TMS** (duplicate / invalid-test detection), Report Portal, Telemetry, Skill Matrix, a Performance Optimizing Agent, and AutoScreen (recruitment automation) — each removing a recurring cost from engineering.
- Delivered measurable business outcomes: **~70% reduction in customer escalations** and reduced quality-linked churn, while building and mentoring the QA organization and developing the next generation of QA leaders.

QA Manager / Principal QA Engineer

Sep 2017 – May 2021

CoMakeIT Pvt Ltd — Iddink cloud EdTech platform • Netherlands

- Established and led a 10-member QA team as both QA Manager and Scrum Master across distributed onshore / offshore delivery — owning resource planning, sprint execution, and quality KPIs.
- Led performance engineering with NeoLoad and JMeter, designing load, stress, and scalability programs that validated the platform under nationwide academic-year peak load.
- Owned release management end-to-end and OWASP-aligned security validation (XSS, SQL injection) for the public-facing application — improving release predictability and security posture.

Senior Member Technical (QA Lead)

Mar 2012 – Sep 2017

Oracle India Private Limited — WebCenter Sites, Sites Cloud, Documents Cloud

- Led a 5-member QA team across Oracle's WebCenter content-management and cloud-services portfolio; built and maintained a production-equivalent multi-stack QA lab certifying every product release.
- Owned performance engineering and profiling (NeoLoad, LoadRunner, JProfiler) across functional, regression, integration, accessibility, and API/web-services testing — resolving JVM, query, and infrastructure bottlenecks pre-release.
- Embedded security testing (Acunetix, Burp Suite) and DevOps automation (Jenkins, Chef, Puppet) into Oracle's secure-release process to accelerate QA-lab provisioning and test-cycle setup.

Senior Database Administrator (MySQL)

Jan 2011 – Mar 2012

NetEnrich Private Limited — Disney / Playdom social gaming

- Led 24x7 production DBA support — backups, disaster recovery, configuration tuning, and query performance — tuning MySQL schemas, queries, and APIs to sustain Facebook-scale gaming traffic on Linux.

Technical Lead — Performance, DBA & Security

Oct 2007 – Sep 2010

Zeta Interactive Private Limited — email marketing, digital publishing & analytics

- Certified Zeta Mail for 1,000 concurrent users at sub-5-second response times and benchmarked Zeta Next Pages for 10,000 concurrent users (NeoLoad); executed zero-data-loss production MySQL migrations and tuned Java / DB queries — establishing SLA benchmarks and eliminating recurring performance defects.

TECHNICAL & AI SKILL ARSENAL

AI & GenAI Claude / Claude Code, Amazon Bedrock (Claude + Titan), Copilot, ChatGPT, Cursor, AWS Kiro, KaneAI, Mabl, TestAI; agentic AI, RAG, vector search (pgvector / HNSW), LLM-assisted test design, MCP, AI-driven failure analysis

Platform / Full-Stack FastAPI (Python), React 19 / TypeScript / Vite, PostgreSQL 17 + pgvector, Redis, SQLAlchemy / Alembic, Docker; RBAC, OIDC / SSO, Fernet encryption, REST API design

Test Automation Playwright (with MCP & AI for NLP automation and self-healing), Selenium WebDriver, TestNG, Protractor (TypeScript), Apache Maven, Allure (TestOps), API / web-services automation

Perf. / APM NeoLoad, JMeter, LoadRunner, JProfiler, Lambda Probe; Datadog, Dynatrace, Prometheus, Grafana, CloudWatch, VisualVM — load / stress / scalability / soak testing & production monitoring

Security / DevOps Acunetix, Burp Suite; OWASP, XSS, SQL injection, ethical hacking; Jenkins, Bamboo, Chef, Puppet, Docker, Bitbucket; Agile / Scrum (PSM-1), CI/CD, DevSecOps, microservices testing

Data & Cloud Oracle, MSSQL, DB2, MySQL, PostgreSQL, Redis; WebLogic, WebSphere, JBoss, Tomcat; AWS; Linux, Solaris, Windows

EDUCATION & CERTIFICATION

B.Tech (ECE) — Vignan Institute of Technology & Science, 2007 • **Professional Scrum Master I (PSM-1)**, Scrum.org
